Why use curl?

Internet doesn't follow specs

Open source

MIT licensed

Simple and stable API

Yet powerful API

HTTP library when libwww was the only choice

C library is still most portable

Bindings for every

language

Decent documentation

Decent stability

Supports all the protocols

Fast

Allows disabling parts for footprint shaving

Many TLS backends

Small devices still like C

How is all this accomplished?

the project

curl and libcurl

Transfer data using internet application protocols

Stable products

Stable API

Maximum portability

MIT

Contributors

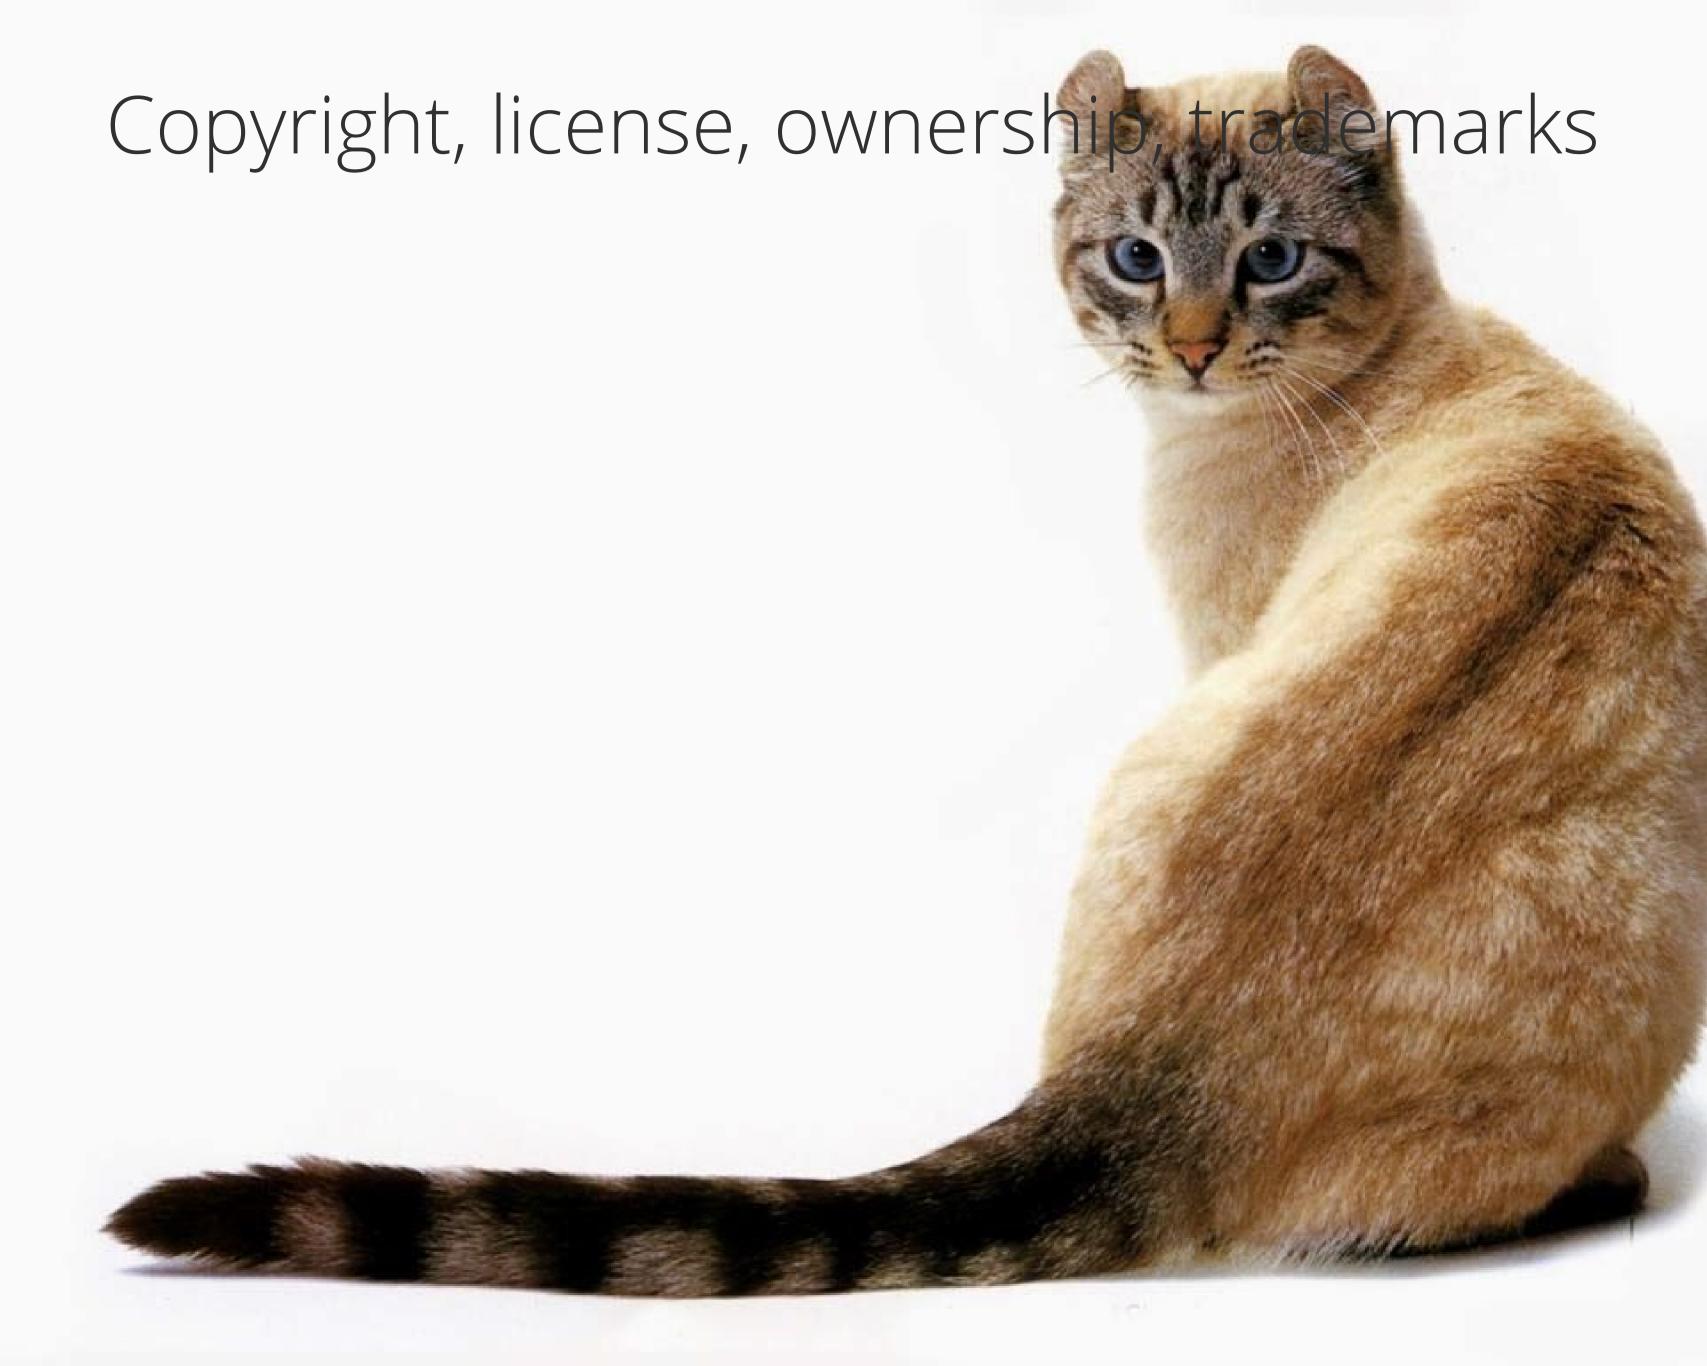

Will curl give us the next heartbleed?

Will curl get us sued on patent claims?

Are contributors risking getting sued?

Copyright, license, ownership, trademarks

Daniel owns most copyrights

Larger contributions may get its own copyright claim

We assume donors have the right to hand over their code submissions

The license is fixed and will remain forever

We have no trademarks but there is an American trademark registered for "curl"

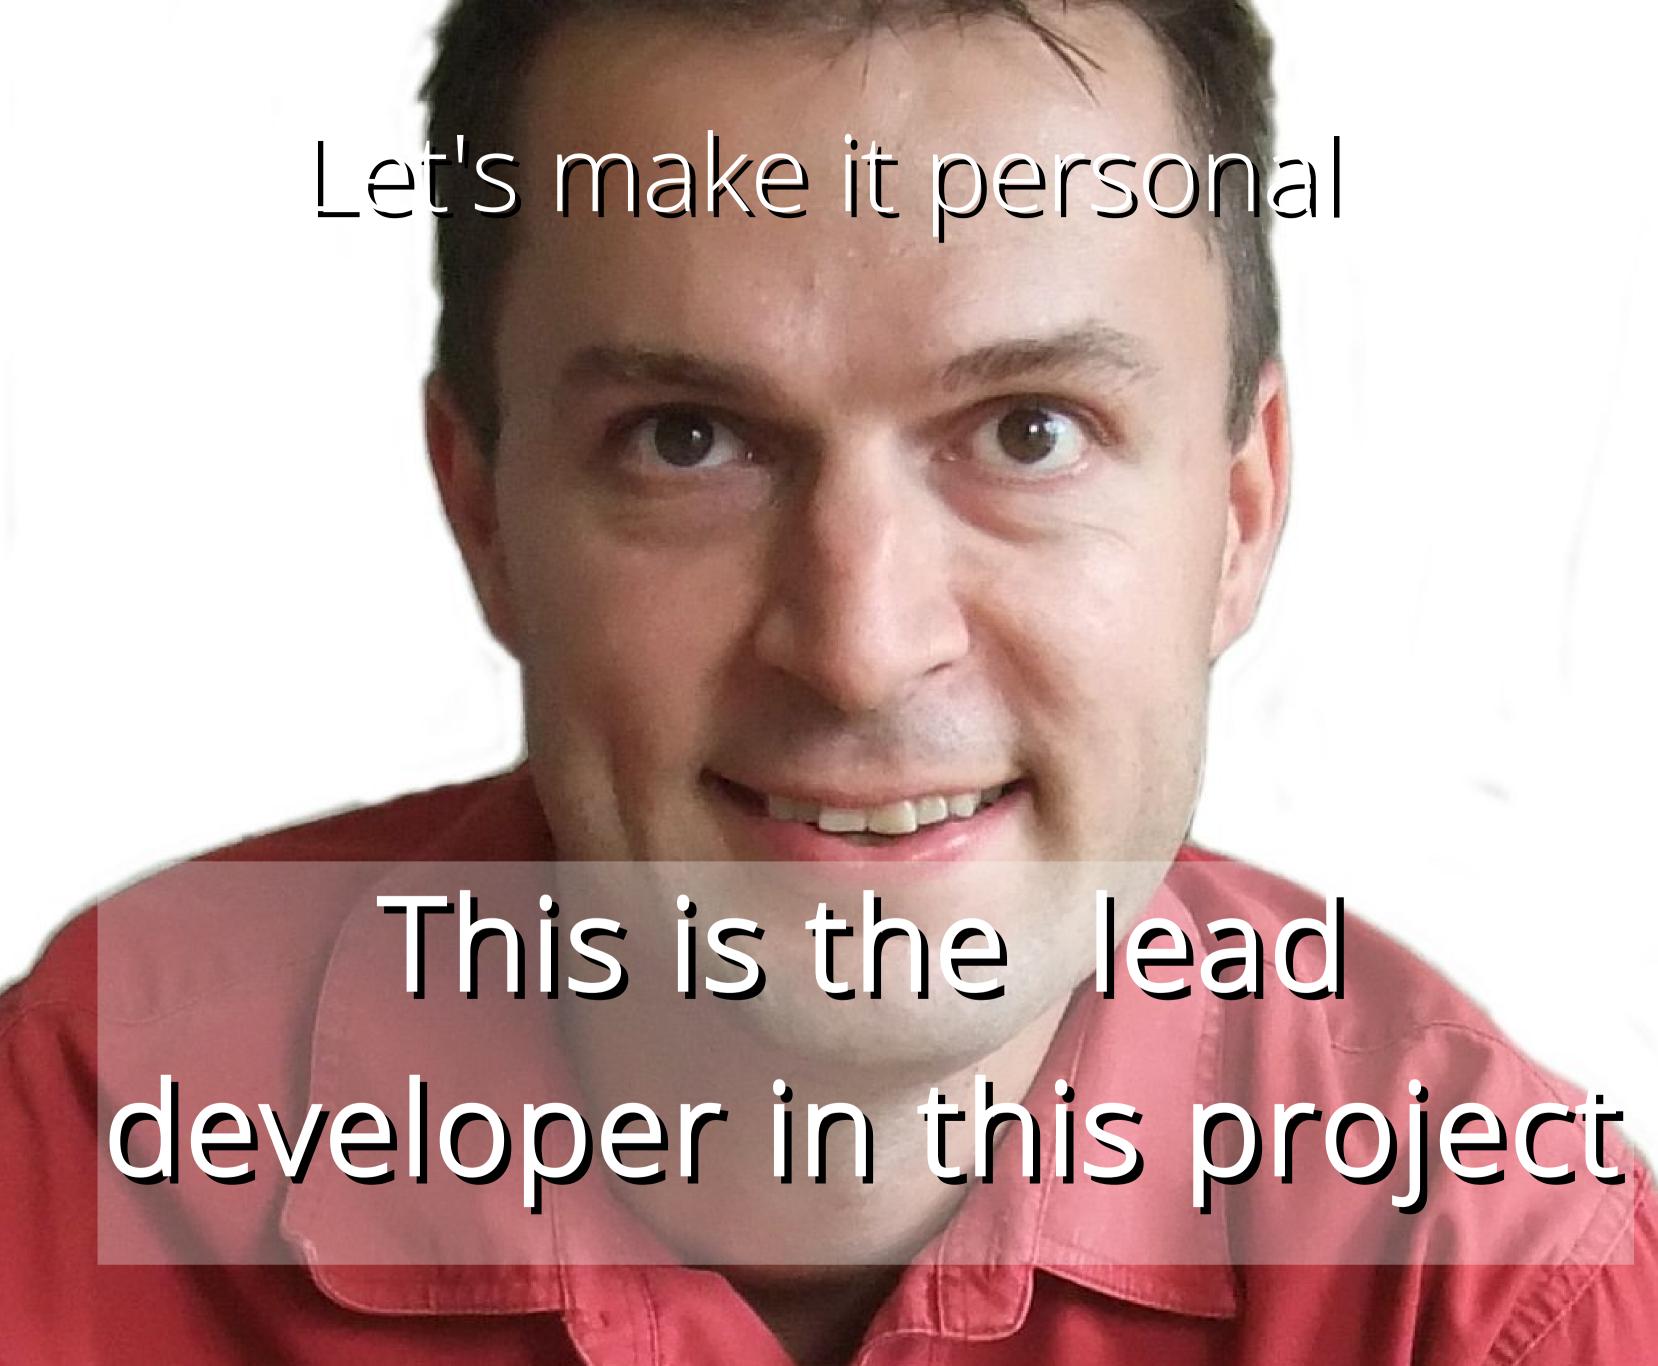

Individual contributors to the project contribute on their own free will

Spare time hackers

Company paid contributors

Company paid feature development

This is my primary hobby

On average, I work two hours on curl per day

Every day of the week, every week of the year

Since 1998

Part time paid by Mozilla since 2014

12,000 spare time hours and counting

24,000 emails sent

15,000 commits

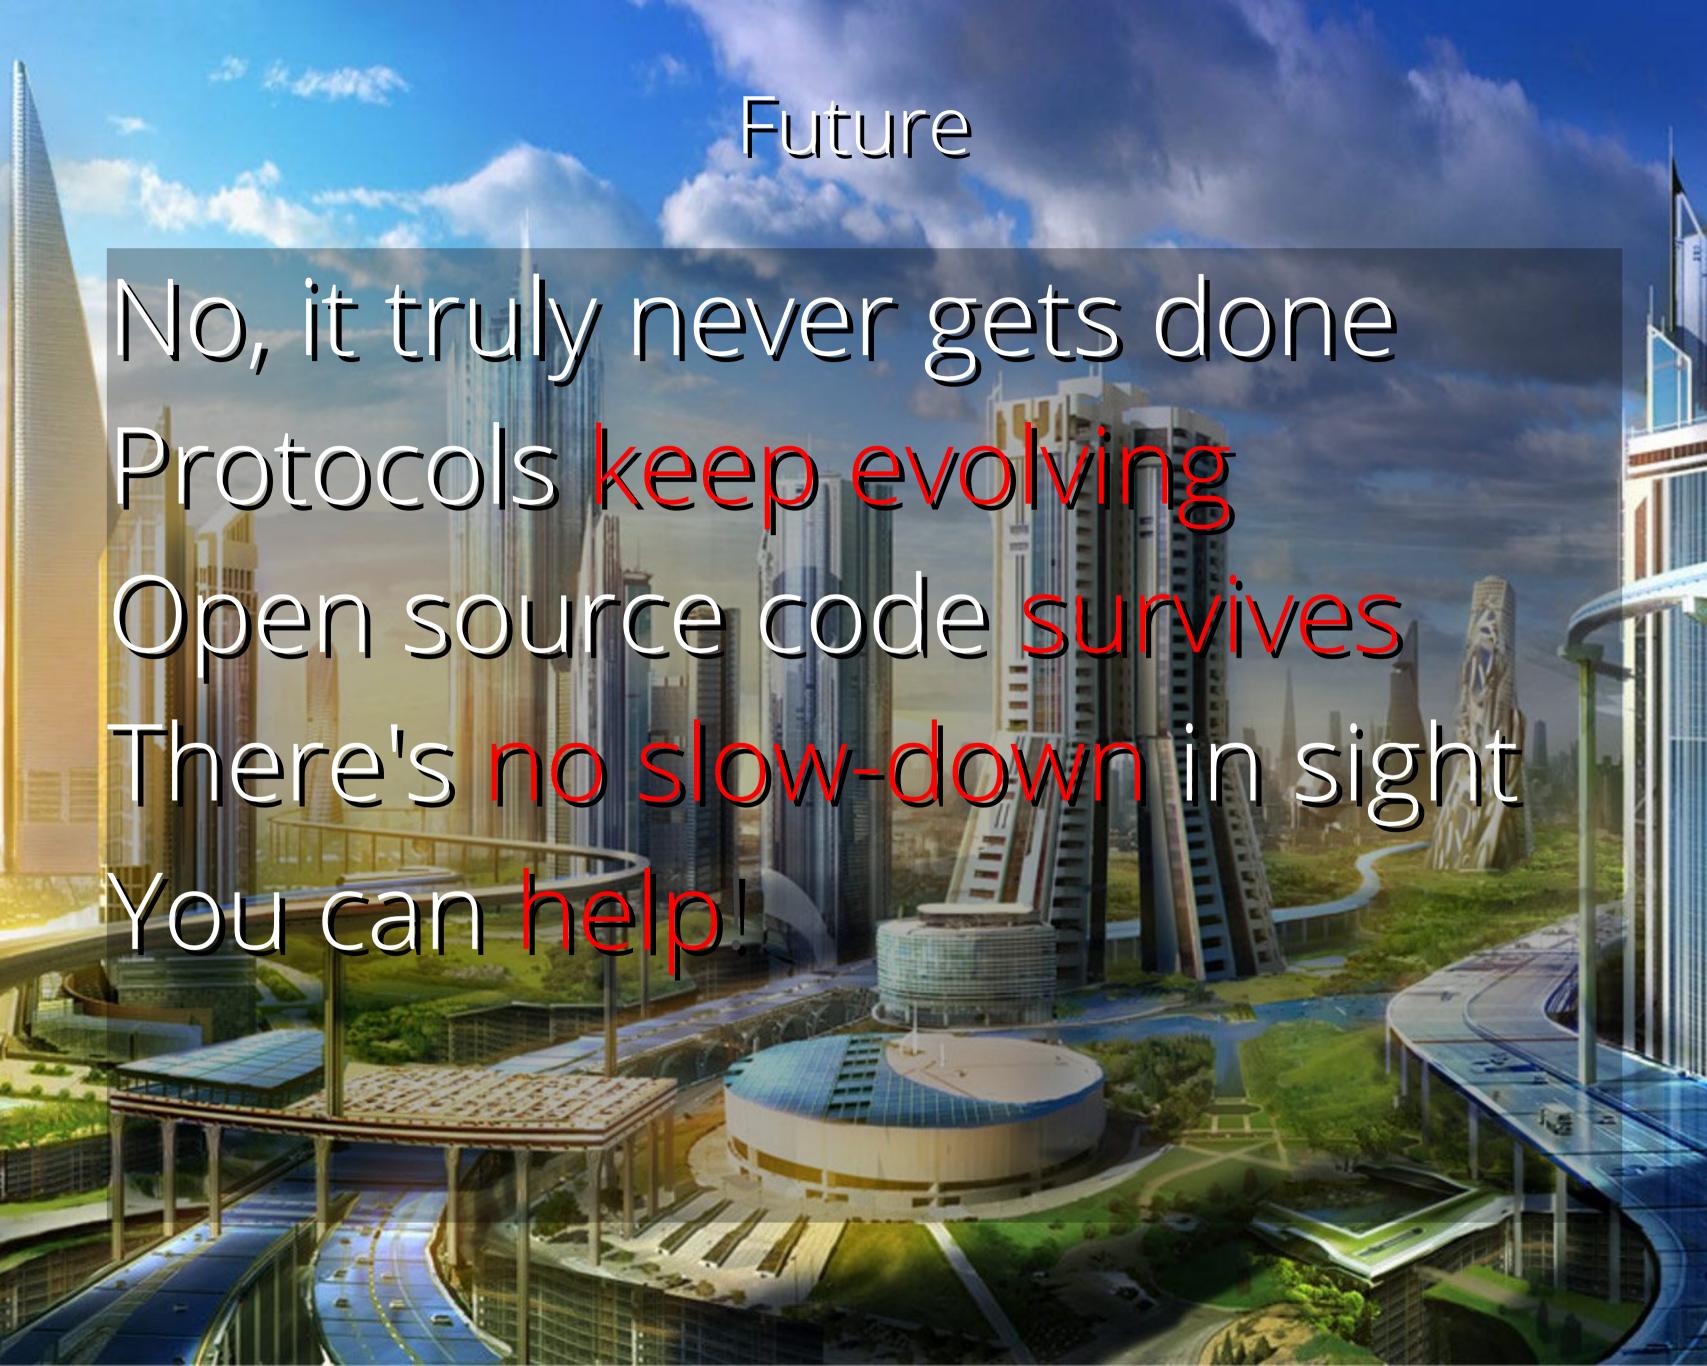

Why I do it?

I'm enjoying creating something that is appreciated by others. Many others.

I want to make curl as good as possible

Everyone needs a hobby

It's the most fun I can imagine

Thank you!
